*The new media server  
ICY BOX IB-NAS6210*

## Private Server for the Personal Multi-Media Cloud

Each ICY BOX media server ICY BOX IB-NAS6210 comes with an own password protected website. Thus you can access the data stored at home on this ICY BOX virtually from any place throughout the world. You can watch videos, enjoy music from playlists or relive the unique moments presented on photographs – any place, any time. Plus:

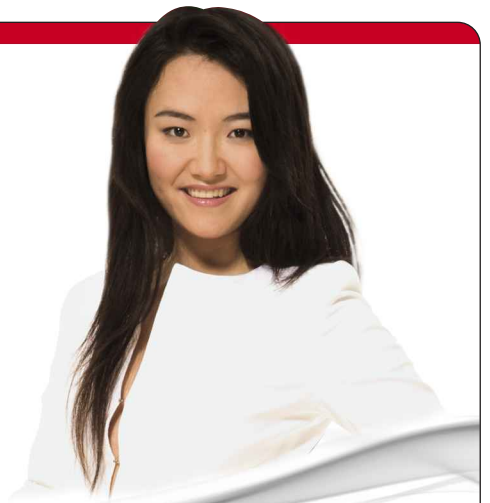

You can share your multi-media enjoyments with family or friends, wherever in the world. No place is too far away. You simply allocate access rights for single files. Every user has her or his own array named "MyLibrary". The community of all users shares the "OurLibrary" array. Guests have access to "Albums" which may contain video, music and pictures.

Versatility and mobility. The ICY BOX media server collaborates with all devices that have access to the Internet. Those are PCs and Macs, DLNA compatible media players, Xbox360 and Sony PS3 as well as TV sets with LAN-interface. The ICY BOX works together even with mobile devices. For this purpose you need a Premium account. A 30 days test-version of it comes with the ICY BOX, the annual fee is Euro 15. The Premium account makes uploads to Flickr or Facebook possible.

Easy to handle. What do you have to know and be capable of to use the media server? Not much. You don't have to be an expert, that's for sure. You need a PC with broadband access. Connect the ICY BOX to your router and simply follow the instructions from the installation CD.

Vast security. First, all data are stored on the user's own HDD in the user's own network and not on some server of a "social network". All data are protected by the network's firewall. Furthermore you can save your data with network backups (up to 200 GB), with a Touch Backup to a USB drive, and with an individual backup to another USB drive. You can connect a second HDD with eSATA and set RAID 1 to mirror your data, which means to create an exact copy.

High quality. Already the first impression speaks for the ICY BOX. Solid aluminium case. Lockable HDD tray. Installation and changing of the HDD are possible without screws, thanks to a new patented mechanism. The Marvel chip 6281 with 1.2 GHz and the 256 MB SDRAM handle several streams simultaneously and without jerking. The Hipserv (Axentra) web-interface provides a secure access to the ICY BOX media server.

Examples from practice. The Paris wedding. Photos display the couple, the coach, the Eiffel Tower. Moments after being taken they are loaded up to the ICY BOX and now they are enjoyed by family and friends all over the world. On the way. You don't have to transfer playlists with the help of hardware. Even in Alaska the traveler can refresh his music or video stock with downloads or streams from his own collection at home. At home. All computers share one printer. Via LAN TV sets and stereos are supplied with movies and music from the collections of all members of the household. Everything else is up to your imagination or testing practice.
